PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience building **API platforms, full-stack web applications, and data analytics solutions**. Designed MuleSoft API-led systems with **OAuth 2.0, PostgreSQL, RAML, DataWeave, and MUnit**; built a browser-based **retro engineering workstation** with React, Next.js, TypeScript, and Zustand; and developed Power BI/DAX analytics for auto-loan credit risk. Strong foundation in **OOB, DBMS, operating systems, and computer networks**.

EDUCATION

Vidya Jyothi Institute of Technology

Bachelor of Technology (B.Tech) in Computer Science & Engineering

Hyderabad, Telangana

2023 – 2027

CGPA: 7.88/10 | Coursework: Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

EXPERIENCE

T-Home FinTech

Data & Business Operations Intern

Hyderabad, Telangana

Jul 2026 – Aug 2026

- Conducted market and competitive research across fintech and gig-economy platforms to identify partnership opportunities, market trends, and worker financial challenges.
- Built and maintained structured datasets of target companies, decision-makers, and business contacts; organized findings into reports supporting partnership outreach and process improvement.

PROJECTS

CATTIPU OS — Retro Browser-Based Engineering Workstation

GitHub

Next.js, React, TypeScript, Zustand, Tailwind CSS, React Flow, Vercel

- Built a browser-based engineering workstation delivering a distinctive **1990s-inspired retro OS experience**, while unifying **Architect → Canvas → Forge → Launch → Live** into one workflow.
- Implemented a persistent desktop environment with **WindowManager, shared filesystem, project state, templates, and cross-application coordination**, replacing fragmented development workflows with one workspace.
- Designed the system to reduce context switching by connecting architecture, visual development, project organization, building, and launch workflows inside a single interactive OS-style environment.

BankGate API — Auto Loan Banking Platform

GitHub

MuleSoft Anypoint Platform, DataWeave 2.0, RAML, PostgreSQL, OAuth 2.0, MUnit

- Designed a four-layer API-led banking architecture separating **Experience, Process, System, and OAuth** services to isolate API, business, database, and authentication responsibilities.
- Developed **18 OAuth 2.0-protected REST endpoints** for customer onboarding, KYC, accounts, transactions, and dashboard aggregation using DataWeave transformations.
- Implemented database isolation, standardized **BANK-XXXX error handling with correlation IDs**, API rate limiting, and **44/44 passing MUnit tests** for service validation.

TaskPilot — Full-Stack Task Management Application

GitHub

React, TypeScript, Vite, Redux Toolkit, Java, Spring Boot, MongoDB

- Built a full-stack task management application using **React, TypeScript, Vite, Redux Toolkit, Java, Spring Boot, and MongoDB** with REST-based frontend-backend communication.
- Implemented task creation, viewing, updating, completion, and deletion through a layered **Controller-Service-Repository** backend architecture.
- Designed the application with centralized frontend state management, reusable components, MongoDB persistence, input validation, and structured API error handling.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, SQL, DataWeave 2.0

Backend & APIs: MuleSoft Anypoint Platform, REST APIs, RAML, OAuth 2.0, JSON, Postman

Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS, React Flow

Databases & Analytics: PostgreSQL, Power BI, DAX, Excel

Tools & Engineering: Git, GitHub, Maven, Vercel, MUnit, API Manager, Anypoint Exchange

Fundamentals: Object-Oriented Programming, DBMS, Operating Systems, Computer Networks
